

J S Chandru

Java Backend & Streaming Data Engineer

chandrujs005@gmail.com | +91 9398604963 | [LinkedIn](#) | Chennai, India

PROFESSIONAL SUMMARY

Java Backend Developer with 1+ year of experience building scalable, high-performance systems using Java and Spring Boot. Hands-on expertise in real-time multiplayer poker game development — cash games, tournaments, and custom features — along with event-driven streaming pipelines using Apache Kafka and Apache Flink. Experienced in REST API development, SDK engineering, and customer data integration. Self-driven professional who transitioned into backend engineering through dedicated upskilling and hands-on project delivery.

TECHNICAL SKILLS

Languages: Java (Java 8, Java 11), SQL

Frameworks: Spring Boot, Spring MVC, REST APIs, Hibernate, JPA, Spring Security

Streaming: Apache Kafka, Apache Flink

Databases: MySQL, Google BigQuery, Elasticsearch

Tools & DevOps: Git, Maven, Grafana, Postman, JUnit, Mockito, CI/CD pipelines, Linux

Concepts: Microservices, Distributed Systems, Event-Driven Architecture, Real-Time Processing, JWT, Agile / Scrum

WORK EXPERIENCE

Junior Software Developer | Dec 2024 – Present

Digient Technologies Pvt Ltd — Chennai, India

Project 1: Multiplayer — Poker Games Platform

- Engineered the Bomb Pot feature — a custom poker variant — from scratch, implementing game logic, pot contribution mechanics, and rule enforcement, expanding the platform's game catalogue.
- Developed and maintained core real-time poker features including cash games and multi-round tournaments for 500+ concurrent players, ensuring smooth session handling and low-latency gameplay.
- Designed and integrated REST APIs for tournament management, supporting player registration, blind structure scheduling, and automated result processing across multi-table events.
- Implemented gameplay integrity mechanisms to detect and prevent unfair player behaviour across live game sessions.

Project 2: OptiKPI — Real-Time Data Monitoring Platform

- Built Apache Flink streaming pipelines for real-time Key Performance Indicator (KPI) analytics, processing 50,000+ events per second with sub-100ms latency.
- Integrated Apache Kafka messaging for scalable backend event streaming across 10+ microservices, enabling reliable asynchronous communication.
- Developed an SDK exposing customer data APIs, enabling clients such as Jokerbet and Playdoit to programmatically retrieve KPI metrics — actively used by 2 major operators.
- Delivered full migration of 5 operators — Jokerbet, Playdoit, Finnplay, Playnorth, and BK8 — from OptiKPI v1 to v2 with 100% data integrity and zero data loss.
- Designed Grafana-based real-time alerting for KPI breach notifications, reducing client incident response time by ~30%.

CERTIFICATIONS

Java Full Stack Development — *Accourd Info Matric, Chennai* | June 2024 – Nov 2024

EDUCATION

B.Com Computer Applications | 2021 – 2024

Govt Degree College Nagari (SVUniversity, Tirupati) — CGPA: 8.00 / 10
